The role of leadership in developing resilience in the public sector

Rethinking Leadership in Public Administration: Challenges and Prospects for the Post-Soviet Countries

Dr. Vitalis Nakrošis, Vilnius, Lithuania

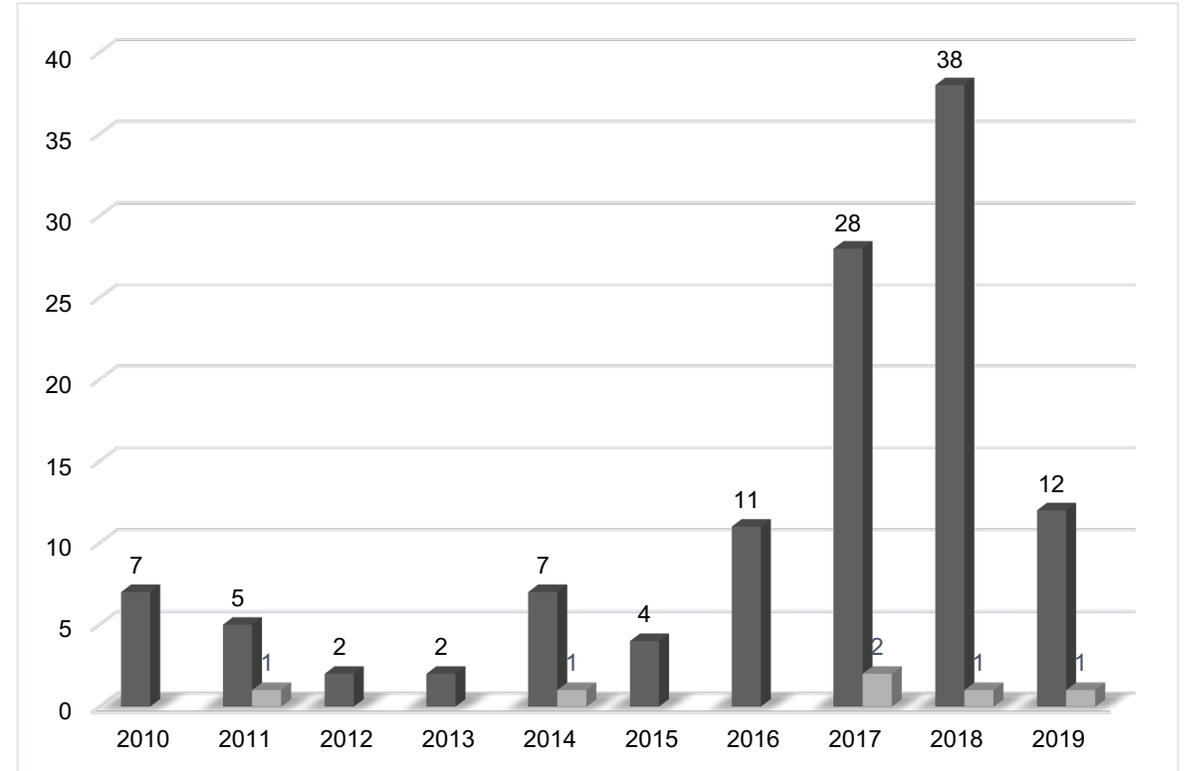

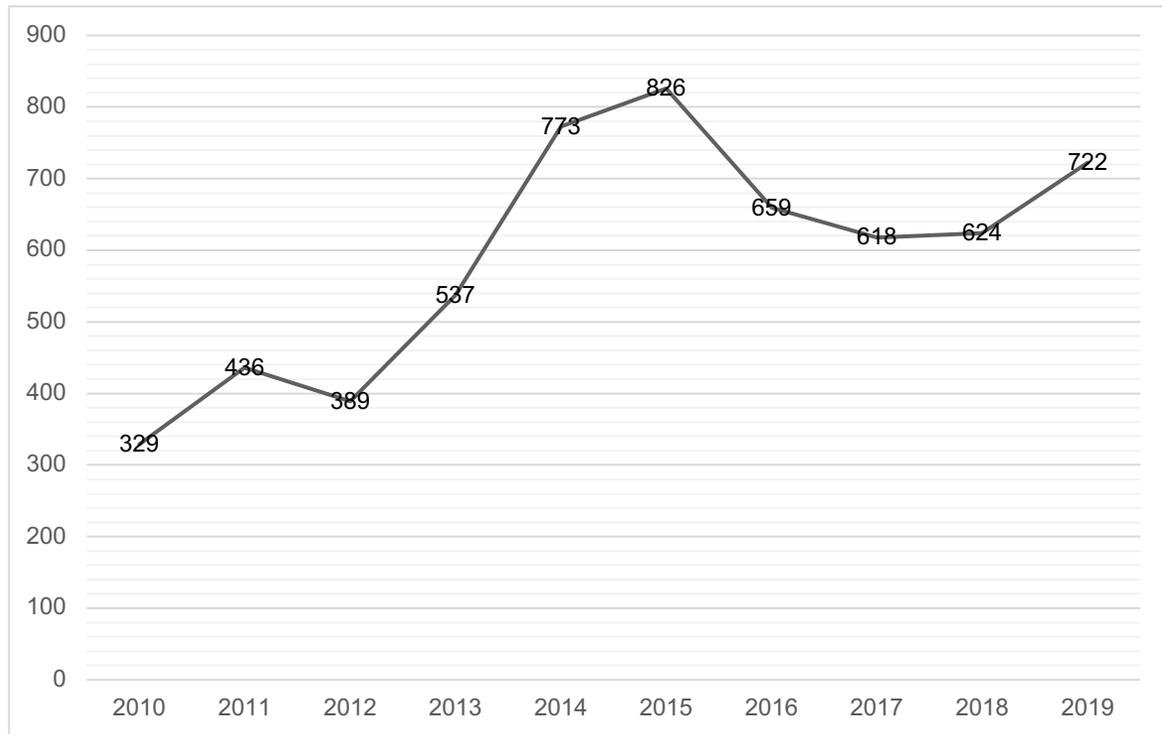

Definition of resilience

- Resilience as the capability of a system or an organisation to absorb shocks, recover from them and by learning or innovation transform itself for a better preparation for future crises (Linkov, Trump, 2019)
- Resilience is transformational: from “bouncing back” (Waugh, Tierney, 2007) to “bouncing forward” (Manyena et al., 2011) and adapting to new reality
- Two main approaches to managing systemic threats:
 - **Risk-based prevention and mitigation:** prepare for and absorb shocks when they happen
 - **Uncertainty-based approach** where resilience relies on built-in capabilities for adaptation and recovery when disruptions occur
- Social domain of resilience: building resilience through adaptive leadership, empowered professionals, collaborative culture, etc.

Trump et al., 2020

Emergency events and situations in Lithuania (2010-2019; before COVID-19)

Top risks globally (WEF, 2021) and nationally (based on official reports)

Top Risks

by likelihood

- 1 Extreme weather
- 2 Climate action failure
- 3 Human environmental damage
- 4 Infectious diseases
- 5 Biodiversity loss
- 6 Digital power concentration
- 7 Digital inequality
- 8 Interstate relations fracture
- 9 Cybersecurity failure
- 10 Livelihood crises

Top Risks

by impact

- 1 Infectious diseases
- 2 Climate action failure
- 3 Weapons of mass destruction
- 4 Biodiversity loss
- 5 Natural resource crises
- 6 Human environmental damage
- 7 Livelihood crises
- 8 Extreme weather
- 9 Debt crises
- 10 IT infrastructure breakdown

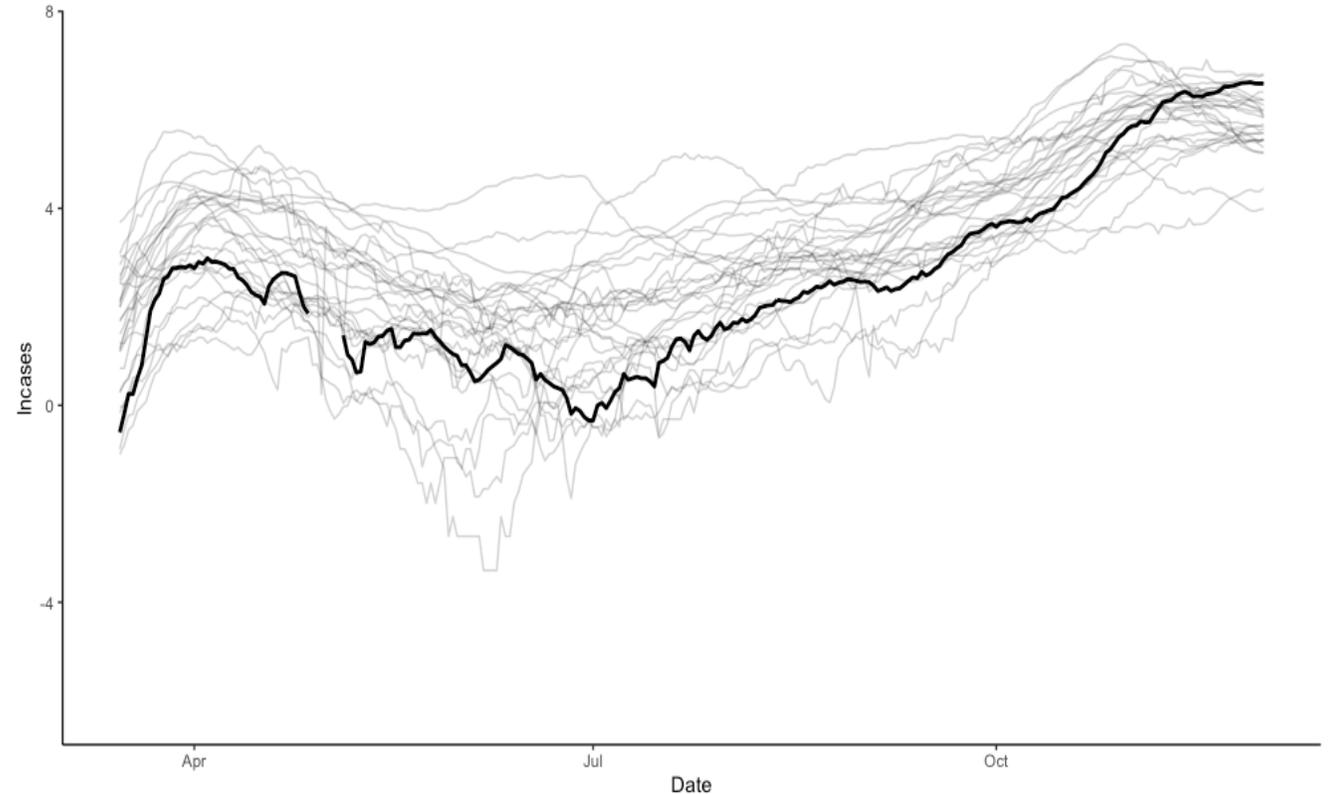

- **Russia's military potential and activity**
- **Dangerous infectious diseases**
 - **Cyber attacks**
- **Droughts and floods**
- **Astravets nuclear power plant**
 - **Economic crises**
 - **Environmental disasters**
 - **Social crises**

COVID-19 as
a grey rhino

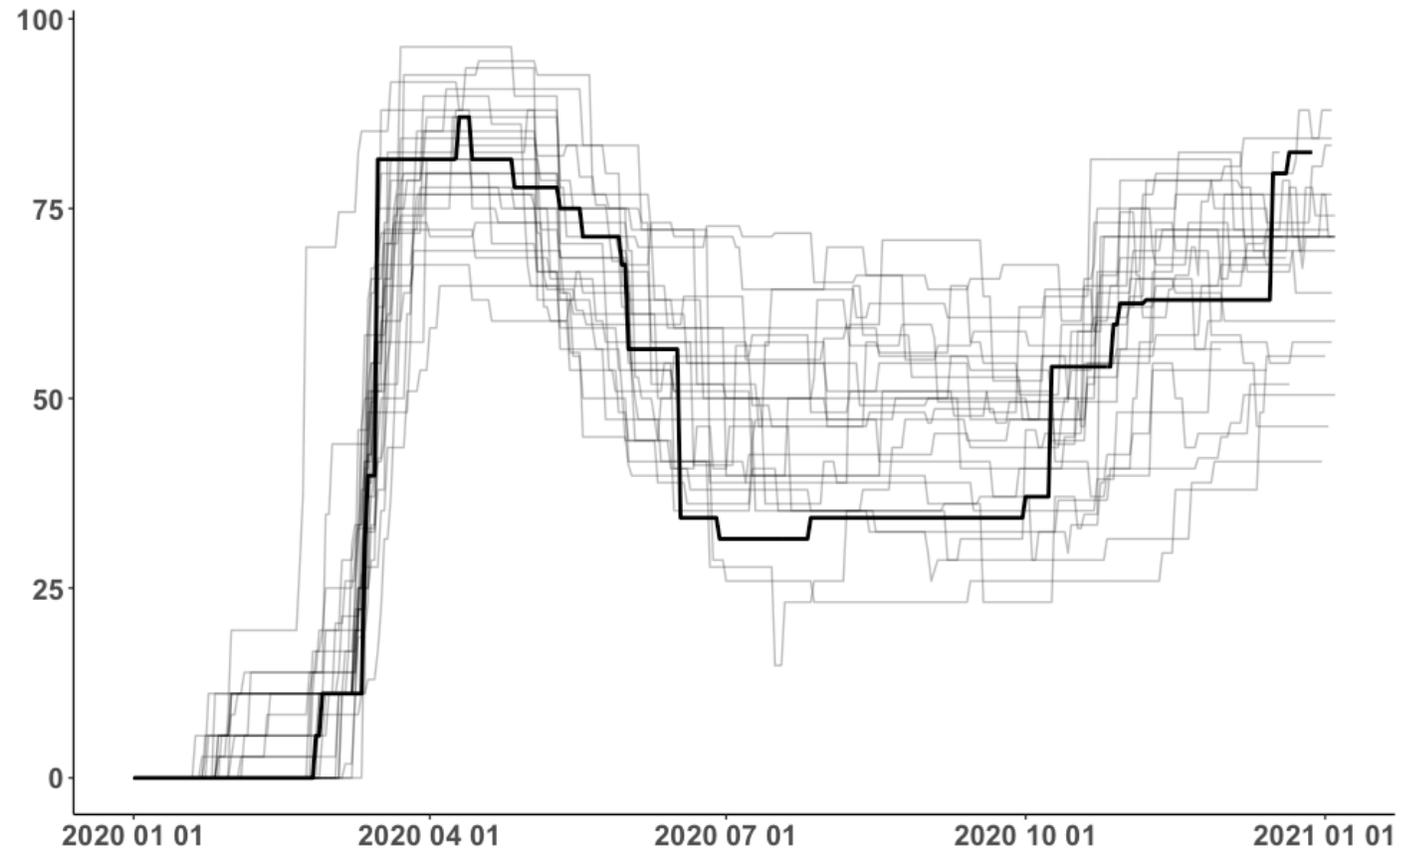

Number of COVID-19 cases in Lithuania (in the comparative EU context)

- On the one hand, the centralised coordination of the COVID-19 crisis during the first wave of the coronavirus proved to be quite successful due to swift decision-making and the mobilisation of available resources
- On the other hand, the country's administrative system was not able to effectively absorb the second wave of COVID-19 due to its limited flexibility to adjust operations to quickly changing conditions of the pandemic

Like a roller coaster:
Lithuania's stringency of response to COVID-19 during 2020

Exercise of leadership during the COVID-19 crisis

- Fast reaction and decisive decisions in the country during to the first wave of COVID-19, but much weaker leadership during the second wave in the context of parliamentary elections
- Command and control style of leadership with a lack of open and empathetic communication
- Key role played by politicians or political appointees, but most of them were replaced after a full change of government at the end of 2020
- **Crisis management needs adaptive leadership but few managers have adequate competences**

Behaviour of professionals during the COVID-19 crisis

- Dedication of health care and other professionals during the COVID-19 pandemic
- Lack of initiative in the career civil service due to the organisational culture of a zero error tolerance
- Weak public and private partnerships and slow take-up of (digital) innovations
- **Crisis management needs empowered professionals but they often lack autonomy and right incentives**

Conclusions

- Development of resilience in the public sector through its key social aspects:
 - adaptive leadership (Heifetz et al., 2009)
 - empowerment of professionals and
 - collaborative governance (Waugh and Streib, 2006)
- Public management reforms are necessary to develop greater resilience in the public sector, but not on the basis of top-down/legislative initiatives
- Transformational way of building resilience on the ground or within a network of stakeholders (involving street bureaucrats and professionals) through the mechanisms of open innovations and partnerships

Challenges and recommendations

Challenges

1. Limited awareness of (uncertainty-based) resilience
2. Ineffective systems of crisis/emergency management
3. Lack of initiative and competences among senior civil servants
4. Slow take-up of digital innovations
5. Rigid management and control systems (the culture of a zero error tolerance)

Recommendations

1. *Integration of the resilience principle into strategic and policy documents (going beyond the health care system)*
2. *Establishment of an integrated centre of crisis management*
3. *Civil service reform, a higher civil service, more flexible management of human resources*
4. *Initiatives and projects of e-government within open innovation systems in cooperation with business organisations and NGOs*
5. *Better balance between accountability and flexibility in public financial management (including risk-based mechanisms of control)*
